JAIDEN ANDERS

Grand Rapids, MI | (269) 598-2294 | Jaidenanders60@gmail.com | jaidenanders.dev | github.com/jaidenanders

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with a B.S. in Computer Science (GPA 3.19, Dean's List) and a portfolio of deployed, production-grade applications spanning React, Node.js, PostgreSQL, Python, and REST API integration. Demonstrated ability to design systems end-to-end from database schema and server-side logic to responsive UI and browser extension APIs. Brings rare operational depth from leading a 60-person team at scale, applying data-driven decision-making to achieve 44% revenue growth and 54% order volume increases year-over-year. Seeking a software engineering role where strong problem-solving, algorithmic thinking, and systems ownership can drive measurable product impact.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), TypeScript, Java, SQL, C, C++

Frontend: React, HTML5, CSS3, Tailwind CSS, Responsive Design, Drag-and-Drop UI, SVG

Backend: Node.js, REST APIs, Express, OAuth 2.0 (Google, Discord), Chrome Extension API

Databases: PostgreSQL, MySQL, Firebase Firestore, Database Schema Design

Tools & DevOps: Git, GitHub, GitHub Actions (CI/CD), Linux, Agile/Scrum, VS Code

Concepts: Algorithms & Data Structures, Graph Traversal, Optimization Heuristics, OOP, MVC, Full-Stack Architecture

PROJECTS

AI-Powered Code Review Tool *2026*

Python · TypeScript · GitHub Actions · CI/CD Pipeline · github.com/jaidenanders/code-review-tool

- Built an automated code review system that analyzes pull requests using AI, providing inline feedback on code quality, potential bugs, and style violations — reducing manual review overhead.
- Architected a Python backend that integrates with the GitHub API, parsing diffs and posting structured review comments programmatically via REST.
- Implemented a TypeScript frontend layer and a GitHub Actions CI/CD workflow that triggers the review pipeline automatically on every PR, demonstrating end-to-end DevOps integration.

Job Application Tracker — tracker.jaidenanders.dev *2025*

React · Node.js · Firebase Firestore · Tailwind CSS · Chrome Extension API · tracker.jaidenanders.dev

- Designed and shipped a full-stack job search management application featuring a Kanban-style board with drag-and-drop status updates, an analytics dashboard, and real-time data sync via Firebase Firestore.
- Built a companion Google Chrome extension using the Chrome Extension API that captures job listings from LinkedIn and Indeed in one click, auto-populating the tracker — eliminating manual data entry entirely.
- Implemented persistent state management and a Node.js backend with RESTful endpoints, ensuring reliable data integrity across sessions and devices.

Store Builder & Route Optimizer — routing.jaidenanders.dev *2025*

React · Custom Algorithmic Engine · JavaScript · routing.jaidenanders.dev

- Built an interactive React application where users draw custom store floor plans (shelves, walls, start/end points) and receive a computed optimal picking route in real time.
- Implemented a multi-phase route optimization engine from scratch without external libraries: Nearest Neighbor heuristic for initial route construction, followed by iterative improvement using 2-opt, Or-opt, and 3-opt local search algorithms — demonstrating deep understanding of computational complexity and graph traversal.
- Designed the full UI/UX including canvas-based floor plan editing, dynamic path rendering, and responsive layout using React and plain JavaScript.

WORK EXPERIENCE

Stocking 1 & 2 — Coach | Walmart *July 2026 – Present*

Grand Rapids, MI

- Coach a 30-person stocking team responsible for freight unload, freight stocking, and inventory accuracy across the backroom and salesfloor.
- Maintain 97% on-shelf availability while processing trucks of 2,500+ items daily, ensuring product is accurately replenished and represented for customers.
- Drive unload efficiency to consistently hit sub-2-hour truck unload times, applying process discipline and workflow sequencing to keep freight moving without bottlenecks.
- Coach and develop associates on standardized stocking procedures, improving consistency, accuracy, and speed across freight-to-shelf execution.

Online Pickup & Delivery — Team Lead | Walmart *Dec 2024 – July 2026*

Portage, MI

- Managed a 60-person team processing 8,000+ items and 350+ orders daily, maintaining throughput and quality at a scale comparable to running a high-volume production system.
- Drove 54% year-over-year transaction volume growth (80K to 133K orders) while simultaneously reducing average customer wait time by 62.3% (8.64 min to 3.25 min) through data-informed workflow redesigns and staffing optimization.
- Delivered 44% year-over-year revenue growth ($6.6M to $9.6M) by identifying and eliminating bottlenecks in order flow, picking efficiency, and staging operations — applying the same root-cause analysis mindset used in software debugging.
- Designed and implemented team training programs that standardized operating procedures across 60 associates, improving consistency and reducing error rates.

Front End Team Lead | Walmart *Jul 2024 – Dec 2024*

Portage, MI

- Supervised a 30-person team across all front-end store operations; coordinated staffing schedules, task delegation, and real-time workflow adjustments to hit daily throughput targets.
- Led training initiatives in collaboration with store management, building reusable onboarding materials that measurably improved new hire ramp time and team performance consistency.

Gas Station Clerk / Asset Protection Investigator / Cashier | Walmart *Jul 2021 – Jun 2024*

Paw Paw & Portage, MI

- Progressed through three distinct roles — including loss prevention investigation requiring analytical and observational skills — while completing a full Computer Science degree full-time.

EDUCATION

B.S. Computer Science — Western Michigan University *Graduated Dec 2025*

GPA: 3.19/4.0 | Dean's List: Fall 2024, Spring 2025, Summer 2025, Fall 2025 | CAC/ABET Accredited

Relevant Coursework: Software Systems Development I & II, Database Management Systems, Web Technologies, Machine Learning, Artificial Intelligence, Design & Analysis of Algorithms, Operating Systems for Cybersecurity
